

Fees for Small Molecule Screens

Each 384-well plate contains about 300 compounds. The remaining wells are empty and can be used for positive and negative controls. For each 384-well plate that is screened, we charge 50,- € based on the following calculation

(Sept 2016: ca. 180 Compound plates)

- 30 € for compounds (10 Cent per compound)
- 8 € for DMSO to rinse and clean the needles used for compound transfer
- 7 € for consumables: sealing foils, tips, plastic troughs, Eppendorf tubes, multidrop-cassette etc.
- 5 € user fee

If you do not screen the complete collection, we charge a fee of 700.- € for setting up your screen. This fee includes assay establishment, automation on the robot, and a pilot screen of ten compound plates. This fee does not apply if you screen the complete collection or more than 25 plates.

If you have further questions please contact Silke Müller (silke.mueller@uni-konstanz.de).
